

[Chapter 15.04 SUBDIVISIONS](#)

Section 15.04.790 Concrete mixing.

The concrete shall be mixed until there is a uniform distribution of the materials. Sufficient water shall be used in mixing concrete to produce a mixture which will flatten and quake when deposited in place, but not enough to cause it to flow. Sufficient water shall be used in concrete in which reinforcement is to be embedded, to produce a mixture which will flow sluggishly when worked and which, at the same time, can be conveyed from the mixer to the forms without separation of the coarse aggregate from the mortar. In no case shall the quantity of water used be sufficient to cause the collection of a surplus in the forms or exceed the maximum allowable slump.

Ready-mixed concrete shall be mixed and delivered in accordance with the requirements set forth in Tentative Specifications for Ready-Mixed Concrete (ASTM C-95). Concrete shall be delivered and deposited in its final position within ninety (90) minutes after adding the cement and water to the mixture. (Ord. 5-1988 § 1 (part); Development Code 4-6-8)
